JOB DESCRIPTION

Job Title: Senior AI & Python Backend Engineer
Department: AI Platform & Core Engineering
Location: Hanoi / Hybrid (2 days remote)

ABOUT THE ROLE

We are looking for a Senior AI & Python Backend Engineer to architect, build, and scale our explainable AI recruitment screening platform. You will design high-throughput FastAPI microservices, integrate Large Language Models with deterministic rule-based scoring engines, and optimize asynchronous document processing workflows.

KEY RESPONSIBILITIES

• Architect and maintain resilient RESTful APIs using Python 3.12, FastAPI, and SQLAlchemy 2.0.
• Build and optimize hybrid candidate-matching pipelines combining rule scoring, vector embeddings, and LLMs.
• Design multi-stage document parsing and OCR pipelines for PDF and DOCX resumes at scale.
• Collaborate with product managers and frontend engineers (Next.js / TypeScript) to deliver explainable AI features.
• Ensure high code quality through automated unit and integration testing (Pytest), CI/CD, and observability.

REQUIREMENTS

• Minimum 4 years of experience in backend software engineering with Python.
• Bachelor's degree in Computer Science, Software Engineering, or a related technical field.
• Strong production experience with FastAPI, PostgreSQL, Redis, Celery, and Docker.
• Hands-on experience integrating LLM APIs, prompt engineering, or semantic vector search.
• Solid understanding of REST API design, JWT authentication, RBAC, and relational database optimization.

REQUIRED SKILLS

Python, FastAPI, PostgreSQL, Redis, Docker, Kubernetes, AWS, Git, REST API, Pytest

BENEFITS

• Competitive compensation package (2,200 - 3,500 USD/month) plus performance bonus.
• 15 days of paid annual leave, premium healthcare insurance, and annual learning budget.
